(Standard numeric format)

Q&A:

- i. Why the output of this Equation = \$30.00?
 - Because one of the standard number formatting patterns was used which is the letter C In the code which treats the number as a value in currency
- ii. What is its benefit?
 - It's a set of letters each letter represents a specific format for numbers
For example the letter (C) represents currencies and the letter (N) represents a number with a decimal point and It's considered as an abbreviation
- iii. Try another example with a different specifier with a screenshot of the output.
 - Pic for the code and the output is uploaded with the file
